1. Introduction

As part of my internship, I was assigned a practical project to understand how Google Ads campaigns are created, structured, and managed. The objective of this task was not only to learn digital advertising theoretically, but also to gain practical exposure by working directly on the Google Ads platform.

In today's digital world, businesses rely heavily on online advertising to promote products and reach potential customers. Among all the advertising platforms available, Google Ads is one of the most widely used because it allows businesses to appear in front of users exactly when they are searching for a product or service. This makes it a very powerful marketing tool.

For this internship project, I chose Nike Running Shoes as the product category for my campaign. I selected this because Nike is a globally recognized sportswear brand, and running shoes are one of the most searched and competitive product categories in online shopping. This made the project realistic and relevant from a digital marketing perspective.

I used the official Nike running shoes webpage as the landing page for the campaign. The campaign was designed in such a way that if a user searched for running shoes or sports footwear on Google, the ad could potentially appear and guide them to the Nike website.

This report presents the complete campaign creation process that I followed during my internship. It includes the campaign objective, campaign type, keyword planning, ad content creation, sitelink and callout additions, campaign optimization review, and my personal learning from the experience. Through this project, I was able to understand how a Google Ads campaign is planned and how every small element contributes to the effectiveness of online advertising.

The screenshot shows the Google Ads interface during the initial setup phase. The browser address bar displays the URL: `ads.google.com/aw/campaigns/new/business?ocid=8048274871&workspaceId=0&cmpnInfo=%7B%7D&subid=ww-ww-xs-ip-awhc-a-ogb_cons%21o2-IN-en-xs-ip-ogb_...`. The page title is "Add your information to get started". Below this, a text input field asks "What's your business name?" with the placeholder "Enter your business name (optional)". The user has entered "Nike India". Below this, a section titled "Where should people go after clicking your ad?" has two options: "A website" (selected) and "Something else". Under "A website", there is a text input field for "Enter a web page URL*" with the placeholder "Consider what you're advertising and enter the most relevant URL. This might be a specific page on your website, your homepage, YouTube channel, or social media page." The user has entered the URL `https://www.nike.com/in/w/running-shoes-37v7jznk1zy7ok`. At the bottom, there is a "Skip" link and a "Next" button. The footer of the page shows "© Google, 2026".

2. Objective of the Project

The main objective of this internship project was to gain practical knowledge of how a Google Ads Search Campaign is created and optimized for a real-world product.

This project was useful because it helped me move beyond textbook learning and understand the actual workflow used by digital marketers. Rather than only studying terms such as keywords, headlines, ad groups, or callouts, I got the chance to use them in a practical setting and understand their role in campaign building.

The specific objectives of this project were:

- To create a realistic Google Ads campaign for a product-based website
- To understand the process of selecting the right campaign objective
- To learn how to choose and organize keywords for a search campaign
- To write effective ad headlines and descriptions
- To understand the role of campaign assets such as sitelinks and callouts
- To review Google Ads recommendations like ad strength and optimization score
- To gain practical exposure to search engine marketing

Another important objective of this project was to understand how customer search intent works. I learned that a successful ad campaign is not just about creating an ad, but about understanding what a customer is looking for and matching the ad to that need in the most relevant way possible.

3. Project Overview

For this internship project, I created a Google Search Campaign for Nike Running Shoes using Nike's official running shoes page as the final destination URL.

The campaign was created with the intention of attracting users who are already interested in products such as:

- running shoes,
- sports shoes,
- training footwear,
- athletic shoes,
- or branded Nike footwear.

This project was designed like a real-world digital marketing task. Even though it was done for internship practice, it followed the same campaign-building structure that businesses use while promoting products online through Google Search.

The campaign mainly focused on:

- bringing relevant traffic to the Nike running shoes page,
- using keywords related to user search behavior,
- writing attractive and relevant ad copy,
- and making the ad stronger with supporting assets.

This project helped me understand that digital advertising is not simply about creating a promotional message. It is about connecting:

- the right user,
- the right keyword,

Project Report on Google ads for imaginary website

- the right ad message, and
- the right landing page.

That was one of the most important practical learnings from this internship task.

4. Why I Chose Search Campaign

For this project, I selected the Search Campaign type because it is one of the most effective and practical campaign formats for promoting products that people are already actively searching for online.

A Search Campaign works by showing ads on Google Search when users type specific keywords. For example, if someone searches for “Nike running shoes” or “best sports shoes for men,” Google may show relevant ads at the top of the search results page.

I chose this campaign type because it fits perfectly with the selected product category. People who search for running shoes usually already have some level of interest or buying intent. This makes Search Ads more useful compared to ad formats that focus only on awareness or visual branding.

There were several reasons why Search Campaign was the best option for this project:

- It targets users with high purchase or browsing intent
- It is ideal for product-based and e-commerce websites
- It teaches important concepts like keywords, ad relevance, and landing page matching
- It is easier to document and explain in an internship report
- It reflects a real-world campaign setup that companies often use

Figure 4.0: Setting up the campaign type to Search type

5. Campaign Objective Selected

While setting up the campaign, I selected Website Traffic as the campaign objective.

I chose this objective because the selected landing page was Nike's running shoes collection page, and the purpose of the ad was to bring users to that page so they could explore the available shoe options.

The Website Traffic objective was appropriate because:

- the landing page was built for product browsing,
- users could view multiple running shoe options,
- and it matched the internship project requirement well.

If I had selected objectives like Sales or Leads, the campaign would have required deeper conversion setup and more advanced performance tracking. Since this project was mainly created for internship learning and platform understanding, Website Traffic was the most logical and practical choice.

This part of the process taught me that campaign objectives are important because they influence how Google Ads recommends settings, optimizes performance, and guides the overall campaign structure.

Figure 5.0: Selecting Campaign Objective for Imaginary Website

6. Step-by-Step Campaign Creation Process

6.1 Step 1 – Starting the Campaign Setup

The first step in the project was opening the Google Ads campaign creation page and beginning the setup process. This stage required entering the basic campaign information, such as the business name, campaign goal, website link, and campaign type.

At first glance, this step looked simple, but it was actually very important because it set the direction for the rest of the campaign. Google Ads uses this information to suggest settings, keywords, and ad content later in the process.

I noticed that Google Ads follows a guided structure that is useful for beginners. It asks one question at a time and tries to simplify the campaign-building process through suggestions and recommendations. This helped me understand how platforms are now designed not just for professionals but also for new users.

This step gave me the first practical exposure to how campaign planning starts in the real digital marketing environment. It showed me that every campaign begins with a clear objective and structured input rather than random ad writing.

The screenshot shows the Google Ads campaign creation page. The browser address bar displays the URL: `ads.google.com/aw/campaigns/new/business?ocid=8048274871&workspaceid=0&cmpnInfo=%7B%7D&subid=ww-ww-xs-ip-awhc-a-ogb_cons%21o2-IN-en-xs-ip-ogb_...`. The page header includes the Google Ads logo, a search bar, and navigation links for Ads Advisor, Appearance, Help, and Notifications. The main content area is titled "Add your information to get started" with a subtext: "This is used to give better suggestions for your industry and generate ads for you to review and edit". The first form field is "What's your business name?" with a text input containing "Nike India". The second form field is "Where should people go after clicking your ad?" with two radio button options: "A website" (selected) and "Something else". Under "A website", there is a text input for "Enter a web page URL*" containing the URL `https://www.nike.com/in/w/running-shoes-37v7jznk1zy7ok`. At the bottom, there is a "Skip" link and a "Next" button. A footer note states: "Suggestions come from your Google Business Profile, Google Maps, and public sources. You can update your Google information at any time. [Learn more about your business profile](#)".

Figure 6.1: Initial Google Ads campaign setup interface showing the beginning of the campaign creation process.

6.2 Step 2 – Selecting the Final URL

After the initial campaign setup, the next major step was selecting the Final URL, which is the webpage users would visit after clicking the ad.

For this project, I selected the official Nike Running Shoes page from Nike’s website. This was an important decision because the landing page should always be closely related to the ad content and the user’s search intent.

For example, if someone searches for “Nike running shoes,” they should ideally land directly on a page showing Nike running shoes — not a general homepage or unrelated sportswear section. This creates a better user experience and increases the relevance of the ad.

This step helped me understand the importance of landing page relevance in digital advertising. A well-written ad can still perform poorly if it takes the user to the wrong destination. Therefore, the final URL is not just a technical field; it is a major strategic part of the campaign.

By selecting a product-specific landing page, the campaign became more realistic and professionally structured.

6.3 Step 3 – Display Path Setup

After entering the final URL, I observed the section called **Display Path**. This is the shorter and cleaner version of the URL that appears below the main website name in the ad preview.

Although it does not change the actual destination page, the display path helps users understand what type of content they can expect after clicking the ad. It acts as a visual clue that improves the appearance and readability of the ad.

instead of showing a long and complicated web address, a display path like:

www.nike.com / running / shoes

Where should people go after clicking your ad?

☒ A website
Consider what you're advertising and enter the most relevant URL. This might be a specific page on your website, your homepage, YouTube channel, or social media page.

Enter a web page URL*
<https://www.nike.com/in/w/running-shoes-37v7jznk1zy7ok>

☐ Something else

Suggestions come from your Google Business Profile, Google Maps, and public sources. You can update your Google information at any time. [Learn more about your business profile](#)

[Skip](#) [Next](#)

© Google, 2026.

Figure 6.3: Displaying Path Setup of landing page of the imaginary website.

7. Headline Creation

One of the most important parts of the campaign creation process was writing the headlines for the search ad.

In Google Ads, headlines are short lines of text that appear prominently in the ad and are often the first thing a user notices. These headlines need to be:

- relevant,
- attractive,
- keyword-rich,
- and concise.

Google Ads allows multiple headlines to be added in a Responsive Search Ad, and then Google automatically tests different combinations based on user searches. This means that headlines should not all say the same thing. Instead, they should cover different angles of the product while still remaining relevant.

For this campaign, the headlines were written around product appeal, brand trust, and search intent.

Headlines used / suitable for this campaign:

- Nike Running Shoes Online
- Buy Nike Shoes Online
- Best Nike Running Shoes
- Nike Shoes India Official
- Shop Nike Sports Shoes
- Men's Running Shoes Nike
- Women's Running Shoes
- Lightweight Running Shoes
- Official Nike Running Gear
- Comfort Meets Performance
- Premium Sports Footwear
- Designed for Daily Running
- Shop New Nike Arrivals
- Trusted Sports Brand
- Running Shoes for Every Pace

This part of the project was very useful because it taught me how difficult it can be to write effective ad copy in a limited number of characters. I realized that ad writing is not just about promotion; it is also about clarity, relevance, and customer attraction.

Project Report on Google ads for imaginary website

Figure 7.0: Responsive Search Ad section showing headline creation and display path setup.

Figure 7.1: Responsive Search Ad section showing headline creation and display path setup.

8. Description Writing

Descriptions provide more space than headlines and help explain the product in a slightly more detailed and persuasive way. While headlines are meant to grab attention, descriptions help the user understand why the product is worth clicking.

The descriptions for this campaign were written to highlight:

- comfort,
- performance,
- style,
- and Nike's product appeal.

Descriptions used / suitable for this campaign:

- Explore Nike running shoes built for speed, comfort, and everyday performance.
- Shop lightweight and stylish Nike sports shoes for men and women online.
- Discover the latest Nike running shoes designed for workouts, training, and daily runs.
- Buy from the official Nike store and explore premium footwear for all levels of runners.

This part of the project helped me understand that good ad descriptions should not simply repeat the headlines. Instead, they should provide additional value and support the customer's decision to click.

I also learned that descriptions should be written from the customer's point of view. Instead of focusing only on the product name, it is better to highlight how the product is useful, comfortable, or suitable for the user.

The screenshot shows the Google Ads 'Keyword and asset generation' interface. The main form is titled 'Keyword and asset generation' and includes a 'Get help creating your ad' section. Below this, there is a 'Where will people go when they click your ad?' section with a 'Final URL (required)' field containing 'https://www.nike.com/in/w/running-shoes-37v7jznk1zy7ok'. A note states 'Keyword and asset generation is not available in all languages'. The 'What makes your products or services unique?' section has a 'Describe the product or service to advertise (required)' field with a text area containing the following promotional text: 'Nike Running Shoes combine performance, innovation, and style to help athletes and everyday runners perform at their best. Whether customers are looking for lightweight trainers, cushioned long-distance running shoes, or versatile footwear for workouts and daily activity, Nike offers options designed for comfort, support, and durability. The official Nike India online store features the latest running shoe collections for men and women, including bestselling styles and new arrivals. With advanced sportswear technology, sleek designs, and trusted brand quality, Nike Running Shoes are made to inspire movement, confidence, and peak performance.' At the bottom right, there is a 'Generate' button. The sidebar on the left shows navigation options: Search, Bidding, Campaign settings, AI Max, Keyword and asset generation (selected), Keywords and ads, Budget, and Review. The top of the interface shows the Google Ads logo and a search bar.

Figure 8.0: Description writing section showing the promotional text used for the Nike search

9. Keyword Selection and Relevance

One of the most important parts of a Search Campaign is keyword selection, because keywords decide when the ad may appear on Google Search.

This stage of the project helped me understand that keywords are the bridge between the user's search query and the advertiser's product. If the right keywords are selected, the ad becomes more relevant and has a better chance of being shown to interested users.

For this campaign, the keyword selection was based on:

- the Nike landing page,
- product relevance,
- and likely customer search behavior.

The keywords chosen focused mainly on people looking for:

- running shoes,
- sports shoes,
- Nike footwear,
- or athletic shoes.

Keyword themes used in the campaign:

- nike running shoes
- best nike running shoes
- buy nike shoes online
- nike shoes india
- men's running shoes
- women's running shoes
- sports shoes online
- official nike shoes
- athletic footwear
- lightweight running shoes
- training shoes
- premium sports shoe

Figure 9.0: Keyword selection section showing the search terms planned for the Nike running shoes campaign.

10. Ad Strength Analysis

During the ad creation process, Google Ads showed a feature called Ad Strength. This is a useful indicator that evaluates how complete and effective the ad appears based on Google's best practices.

The ad strength in this project was shown as Average, and Google Ads suggested a few improvements to make it better. These included:

- adding more headlines,
- making headlines more unique,
- improving descriptions,
- and adding more sitelinks.

This was a very practical learning point because it showed me that Google Ads is not just a platform for placing ads, but also a tool that helps advertisers improve the quality of their campaign setup.

From this step, I understood that a good ad is not only about including keywords. It also needs:

- variation,
- uniqueness,
- completeness

11. Optimization Score

Another useful feature I observed during the campaign creation process was the Optimization Score.

This score is provided by Google Ads to indicate how well the campaign is structured based on the platform's recommendations. It gives advertisers a general idea of whether the campaign is complete and aligned with best practices.

The optimization score shown in the project suggested that the campaign had a reasonably strong setup, but there was still room for improvement through additional assets and ad refinement.

This feature helped me understand that campaign creation is not a one-time process. Even after building the ad, there is always a need to review, optimize, and improve the setup.

Optimization score also taught me an important practical lesson: in digital advertising, the work does not stop after creating the campaign. Continuous improvement is always part of the process.

Figure 11.0: Google Ads optimization score and ad strength analysis with campaign improvement suggestions.

12. AI Max and Smart Campaign Settings

During the campaign creation process, I also observed a section related to AI Max / advanced ad group settings.

This section included smart features that Google Ads uses to improve campaign reach and matching. These settings are part of Google's increasing use of automation and artificial intelligence in advertising.

Some of the settings visible in this part were related to:

- search term matching,
- brand controls,
- URL expansion,
- and location-based relevance.

Although I did not deeply customize every AI-related setting in this project, this section gave me a strong understanding of how modern ad platforms are becoming more intelligent and automated.

This step taught me that digital marketing is changing rapidly. It is no longer only about manually entering ads and keywords — now platforms also use machine learning to help improve ad performance and targeting.

Figure 12.0: Image of enabling AI Max for Search campaign

13. Callout Assets

Another important section of the campaign setup was the addition of Callout Assets.

Callouts are short pieces of text that appear below the ad and help highlight additional benefits or selling points of the product. These are not clickable like sitelinks, but they improve the appearance and value of the ad by giving more supporting information.

For this campaign, the callouts were designed to reflect Nike's product quality and customer appeal.

Callouts used / suitable for the campaign:

- Official Nike Store
- Latest Running Styles
- Lightweight Comfort
- Built For Performance
- Shop New Arrivals
- Trusted Sports Brand
- Premium Running Shoes
- Performance Driven Design

This part of the project helped me understand how even small ad extensions can make a big difference. Callouts may look simple, but they help strengthen the message and make the ad appear more complete and trustworthy.

I learned that in digital advertising, users often notice small supporting details before deciding to click.

Figure 13.0: Campaign-level callout assets added to improve ad quality and supporting messaging.

14. Sitelink Assets

One of the most useful parts of the campaign setup was adding Sitelink Assets.

Sitelinks are additional clickable links that appear below the main ad and direct users to specific pages within the website. These are extremely useful because they give users more options and improve the overall functionality of the ad.

For example, instead of only taking the user to one page, sitelinks can help them directly visit sections such as:

- men's shoes,
- women's shoes,
- new arrivals,
- or best sellers.

Sitelinks used / suitable for this campaign:

- Best Sellers
- Men's Running Shoes
- New Arrivals
- Nike Sportswear
- Training Shoes
- Women's Running Shoes

I understood that sitelinks improve both:

- user convenience,
- and ad strength.

Figure 14.0: Creating Sitelinks to imaginary website.

15. Challenges Faced During the Project

While working on this campaign, I faced a few practical challenges, which actually became part of the learning process.

Initially, the Google Ads interface felt slightly overwhelming because there were many options, settings, and recommendations visible at the same time. Since this was a practical internship activity, I had to understand which settings were essential and which were optional.

Another challenge was writing effective ad headlines within the character limit. It was not easy to make each headline both keyword-rich and attractive while keeping it short enough for Google Ads.

Keyword selection was also slightly challenging because I had to think from the customer's point of view. I had to choose keywords that were not only relevant to Nike, but also realistic in terms of what users might actually type into Google.

In addition, Google Ads kept recommending improvements related to ad strength and assets, which showed me that creating a strong campaign requires attention to detail.

These challenges helped me understand that campaign creation is not just a technical task — it also requires:

- logical thinking,
- customer understanding,
- and content writing ability.

16. What I Learned During the Internship

This project gave me a very practical understanding of Google Ads and digital campaign planning.

Before this internship activity, I had a general idea of what online advertising is. But after completing this project, I understood that creating a Google ad involves multiple connected elements, and each one plays an important role in the final result.

My key learnings from this project were:

- how to create a Search Campaign in Google Ads
- how campaign objectives affect the campaign structure
- how to choose and organize keywords
- how to write headlines and descriptions for search ads
- how callouts and sitelinks improve ad quality
- how ad strength and optimization score are used
- how landing page relevance affects campaign effectiveness

Personally, one of the biggest things I learned was that digital advertising is much more strategic than it looks. Every small decision — from the final URL to the wording of a headline — can affect how the ad performs.

17. Strengths of the Campaign

After reviewing the campaign, I observed several strengths in the overall setup.

The campaign was built around a strong and well-known brand, which already had high search interest and clear product demand. The landing page selected was highly relevant to the ad topic, which improved the overall structure of the campaign.

The ad content was also aligned well with the selected product category, and the use of keywords, sitelinks, and callouts helped make the ad more complete and realistic.

Some major strengths of the campaign included:

- relevant landing page selection
- keyword-based ad copy
- clear product focus
- effective use of ad extensions
- strong learning value for internship purposes

Overall, the campaign setup was suitable for a beginner-level practical project and gave me useful real-world exposure to how Google Search Ads are built.

18. Areas for Improvement

Although the campaign was structured well, I also noticed a few areas where it could be improved in future versions.

For example, more headline variations could be added to improve the ad strength further. The descriptions could also be tested with slightly stronger call-to-action phrases to make them more persuasive.

The keyword list could be organized further using match types and tighter grouping for even better control. More sitelinks and additional ad assets could also be added to improve the overall completeness of the ad.

This part of the project taught me an important lesson: a campaign is never truly “finished” after setup. In real digital marketing, campaigns are always tested, optimized, and improved over time.

19. Recommendations for Future Improvement

Based on what I learned during this project, I would recommend a few improvements for future campaign versions.

Recommendations

- Add more unique and customer-focused headlines
- Improve call-to-action phrases in descriptions
- Expand sitelink coverage to include more categories
- Organize keywords more strategically by theme
- Review campaign performance if run live
- Test different ad copy variations for better engagement.

20. Conclusion

To conclude, this internship project was a very useful and practical learning experience. Through the process of creating a Google Ads Search Campaign for Nike Running Shoes, I gained direct exposure to how digital ads are planned and structured on a real advertising platform.

This project helped me understand the role of:

- campaign objectives,
- keywords,
- ad headlines,
- descriptions,
- callouts,
- sitelinks,
- optimization score,
- and ad preview.

More importantly, it helped me understand that successful advertising is not just about promoting a product, but about showing the right message to the right person at the right time.

Overall, this project improved my confidence in using Google Ads and gave me a better understanding of search engine marketing, ad creation, and campaign planning. It was one of the most valuable practical tasks of my internship experience.
